The Honorable William K. Reilly  
Administrator  
Environmental Protection Agency  
401 M Street  
Washington, D. C. 20460

Dear Mr. Reilly:

We are deeply concerned about the air quality of our region and we are constantly in search of ways to reduce air pollution. I have been informed that a performance additive known as HiTEC 3000 may present a real opportunity to improve air quality substantially in the United States.

This additive seems to have a significant impact in reducing NOx, which plays a major role in reducing smog, and I understand that this additive is compatible with gasolines containing methanol, ethanol, and other reformulated fuels.

It is critical that any possible way to improve our nation's air quality be examined to the fullest, and it is my hope that this additive be given every possible consideration by the Environmental Protection Agency.

Sincerely yours,

*Lura Tally*
